

DICHIARAZIONE SULL'ESISTENZA DI POTENZIALI CONFLITTI DI INTERESSE, SULLO SVOLGIMENTO DI EVENTUALI INCARICHI E/O TITOLARITÀ DI CARICHE

Il/la sottoscritto/a, ...ANGELO... STEFANO.....in qualità di soggetto incaricando per il corso/seminario...INCARICO...CAGLIARI....VOLTERRA DRINSI..... ai sensi dell'art. 53, c.14 del D. Lgs.165/2001 e s.m.i. e dell'art. 15, c.1, lett.c) del D. Lgs. 33/2013 e s.m.i.

DICHIARA

sotto la propria personale responsabilità, consapevole delle conseguenze penali previste dall'art. 76 del Testo Unico di cui al D.P.R. 28 dicembre 2000, n. 445, per le ipotesi di falsità in atti e dichiarazioni mendaci,

(barrare una delle due seguenti ipotesi):

- di ritenere rilevanti, al fine di una valutazione da parte di codesta Amministrazione sulla eventuale sussistenza di situazioni, anche potenziali di conflitto di interesse con il docente proponente l'incarico e/o con codesta Amministrazione, le seguenti informazioni:
(specificare di seguito)
-
.....

di NON trovarsi in alcuna situazione, effettiva o potenziale, di conflitto d'interessi con il docente proponente e/o con codesta Amministrazione

- di impegnarsi comunque nel corso della/e lezione/i a non operare riferimenti espressi che contengano giudizi di valore su prodotti che possano determinare una situazione di conflitto di interesse.
- di impegnarsi ad informarne via email ed in tempo utile il Responsabile Scientifico, il tutor e la U.O. Alta Formazione, qualora per esigenze didattiche fosse necessario fare riferimento ad uno specifico prodotto o azienda, ad esempio nell'ambito della presentazione di un "caso aziendale" o "caso scientifico", e non fosse in alcun modo possibile conseguire gli obiettivi formativi senza citare espressamente l'azienda o il prodotto.

avere svolto incarichi e/o di essere titolare di cariche in enti di diritto privato regolati o finanziati dalla pubblica amministrazione, ovvero di svolgere attività professionale a favore di tali enti o aziende
(specificare di seguito: anno, ente/azienda, tipologia di rapporto)

...2024...CENTRO DI RICERCA...“E. PIAGGIO”...ASSISTENZA DI RICERCA.....

WORK EXPERIENCE

November 2023 – present

Research Fellow

Research Center "E. Piaggio" - Pisa, Italy

- Research Grant: "*Study, development and implementation of planning and control strategies for pick and place/throwing cluttered objects with advanced industrial manipulators and elastic grippers.*".
- Scientific Sector: Systems and control engineering
- Objective: The objective of this research is to develop and implementation of real-time planners and controllers that make possible the dynamic grasping of objects in narrow and cluttered spaces and placing/throwing them in desired boxes starting from existing methodologies. This research has been carried out within the DARKO (Dynamic Agile Production Robot That Learn and Optimise Knowledge and Operations) European Project framework.
DARKO European Project Website
- Supervisors: Prof. Antonio Bicchi, Prof. Paolo Salaris.

February 2022 – October 2023

Research Fellow

Research Center "E. Piaggio" - Pisa, Italy

- Research Grant: "*Study and development of robotics handtools and control algorithms for advanced industrial manipulators*".
- Scientific Sector: Systems and control engineering
- Objective: The objective of this research is to develop and design pneumatic grasping tools capable of throwing objects beyond the robot's kinematic workspace in order to maximize process efficiency. The entire pneumatic system has been tested on the Franka Emika robot by using the ROS C++ interface. This research has been carried out within the DARKO (Dynamic Agile Production Robot That Learn and Optimise Knowledge and Operations) European Project framework.
DARKO European Project Website
- Supervisors: Prof. Antonio Bicchi, Prof. Paolo Salaris.

December 2021 – January 2022

Research Collaborator

Research Center "E. Piaggio" - Pisa, Italy

- Research Topic: Study and implementation of throwing strategies for collaborative robots within the DARKO (Dynamic Agile Production Robot That Learn and Optimise Knowledge and Operations) European Project framework.
DARKO European Project Website
- Business or Sector: Robotics Research

EDUCATION AND TRAINING

2016 – 2021

Master's degree in Robotics and Automation Engineering

Università di Pisa, 110/110.

- Thesis Title: "*Study and development of optimal control strategies to enhance capabilities of a collaborative robot in throwing objects*"
- Thesis Description: The dissertation aimed to find a throwing strategy for the collaborative robot UR10e to throw an object with a limited mass. The throwing trajectory planning was solved with nonlinear constrained optimization methods by using the MATLAB optimization toolbox.
- Supervisors: Prof. Antonio Bicchi, Prof. Paolo Salaris, Eng. Alessandro Palleschi.

2011 – 2016

Bachelors's degree in Biomedical Engineering

Università di Pisa, 101/110.

- Thesis Title: "Finite element method (FEM) analysis of the extrusion process of hydrogels"
- Thesis Description: The dissertation aimed to model the extrusion process of a polypeptide hydrogel produced at University of Manchester. The extrusion process has been modelled by using the COMSOL multiphysics simulation software.
- Supervisors: Prof. Giovanni Vozzi, Eng. Carmelo De Maria.

2006 – 2011

Italian Secondary School Diploma

Liceo Scientifico "Enrico Fermi", Massa (MS), Italy, 87/100.

PROJECT EXPERIENCE

Professional projects

2023

Doctoral Summer School on Robotics and Intelligent Machines: Co-teaching assignment

Volterra, 30 August-05 September 2023

- As a co-teacher, I contributed to the GitHub repository of Mechatronics and Robotics Lab for Innovation of Politecnico di Milano by writing a package based on ROS services for planning and control the ABB YuMi robot equipped with a 2-finger gripper using the Movelt! C++ interface to perform tasks involving the manipulation of a 6-sided die.
[Merlin Laboratory GitHub repository](#)

DARKO Project Integration Milestone

Arena 2036, Stuttgart, 11-17 June 2023

- During the integration week, I tested the ROS C++ packages developed during the previous pre-integration project for the Franka Emika robot mounted on the mobile robotic platform to perform pick and place tasks for moving objects such as small items like gaskets, screws, and bolts from a shelf towards a fixed box placed on a conveyor belt. My contribution was on planning and control, working collaboratively with other partners to ensure integration with other areas like perception and human-robot interaction. A live demonstration was performed in front of the project's stakeholder to show complex manipulation and navigation tasks with the mobile robotic platform.

DARKO Project Pre-Integration Milestone

Arena 2036, Stuttgart, 19-23 April 2023

- During the pre-integration week, I wrote and tested the ROS C++ service for the human-like trajectory planning on the Franka Emika robot. Software and hardware integration have been done on the DARKO mobile robotic platform to integrate ROS packages for motion planning and control.

2022

Demo Maker Faire Rome - The European Edition

Rome, 10-14 October 2022

- As part of DARKO project, I programmed the Franka Emika robot with the Movelt! C++ interface in ROS equipped with an anthropomorphic gripper for pick and throw tasks using the pneumatic hand-tool equipped with a suction cup. The entire demo involved creating a demonstration of the robot's capabilities, which included picking objects from a shelf by using a vacuum action and throwing them towards a target outside the robot's kinematic workspace.

Academic projects

2020

Implementation of dynamic controllers on the Franka robot and optimal adaptive control

Research Center "E. Piaggio", Prof. Antonio Bicchi, Prof. Paolo Salaris, Robot Control.

- Implementation and testing of dynamics controllers (Proportional Derivative, Computed torque and Backstepping control) with the robot-control framework (*Ros Control*) of ROS on the Franka Emika robot.

From joint position and velocity measurements, nonlinear model-based dynamic control techniques have been applied to follow references by using joint torque command interface.

- Study on optimal trajectories for the estimation of the robot parameters for kinematic and dynamic adaptive control.

Studied a potential method for finding persistently exciting trajectories for parameter identification in the case of an RR planar manipulator. The method is based on an optimization for maximizing the smallest singular value of the convolution integral of the regressor.

2019

Study and characterization of the directivity index for linear and volumetric arrays

Università di Pisa, Prof. Andrea Caiti, Underwater system.

- Spherical hydrophones with omnidirectional beam pattern were assembled to create linear and volumetric arrays with several geometries to maximize the Directivity Index (DI) of the entire array using the Antenna Toolbox of MATLAB.

2017

Analysis of the inverse differential kinematics and dynamics of a 4 DOF translational parallel robot manipulator

Università di Pisa, Prof. Marco Gabiccini, Robot Mechanics.

- Starting from the kinematics and dynamics model of the *Tripteron*, a 3 DOF translational parallel manipulator, inverse differential kinematics and dynamics of the 4 DOF *Quadruperton* translational parallel manipulator were studied and implemented using the Wolfram Mathematica software.

Personal projects

2024

Robotic Manipulators simulation and control

- Developed ROS2 packages to spawn the Franka Emika Panda robot in Ignition Gazebo for motion planning and control with MoveIt!. [Franka Emika Ignition ROS2 GitHub repository](#)

Planning Utilities for controlling Robotic Manipulators

- Developed a ROS meta-package to simplify path planning and execution tasks for controlling robotic manipulators using MoveIt!. This package provides a convenient way to perform Cartesian, Joint and Slerp planning and plan execution.

PATENT

2023

Gripper a Vuoto, August 2023. Angeli S., Salaris P., Catalano MG., Bicchi A. (Accepted at Ufficio Italiano Brevetti e Marchi (UIBM))

- My contribution to the patent encompassed several key aspects, starting with the mechanical design of the pneumatic tool using Creo Parametric software. I was responsible for assembling the components to construct the entire pneumatic system and developing ROS packages to control and interface with it. The final phase of my involvement included conducting experimental tests with the Franka Emika Panda robot to validate the functionality and performance of the integrated system.

PROCEEDINGS OF INTERNATIONAL MEETINGS

- De Maria C, Chiesa I, **Angeli S**, De Acutis A, Mattei G, Montemurro F, Smith AM, Saiani A, Vozzi G. *Modelling of scaffold fabrication with a pH-sensitive hydrogel*. Biofabrication 2016, 29-31 October, Winston-Salem, NC, USA.
- De Maria C, Chiesa I, **Angeli S**, De Acutis A, Mattei G, Montemurro F, Smith AM, Saiani A, Vozzi G. *3D bioprinting of self-assembling hydrogels*. TERMIS 2016, 28 June – 1 July, Uppsala, Sweden.

PROCEEDINGS OF NATIONAL MEETINGS

- De Maria C, Chiesa I, **Angeli S**, De Acutis A, Montemurro F, Mattei G, Smith AM, Saiani A, Vozzi G. *Characterization and biofabrication of a pH-sensible hydrogel*. V Congress of the National Group of Bioengineering, Napoli, 20-22 June 2016.

PERSONAL SKILLS

Mother tongue Italian

Language **English – B2**

Levels:A1/A2:Basic user - B1/B2: Independent user - C1/C2:Proficient user
Common European Framework of Reference for Languages

Additional Experience English Certificate B2 Level (86/100) - Centro Linguistico Interdipartimentale (CLI), 2022, Università di Pisa.

JOB-RELATED SKILLS

- C++ - Proficient
- Object Oriented Programming - Proficient
- ROS - Advanced
- Gazebo - Advanced
- Movelt! - Skilled
- MATLAB/Simulink - Proficient
- Git - Proficient
- LaTeX - Competent
- Windows, Linux - Proficient
- COMSOL Multiphysics - Competent
- Wolfram Mathematica - Competent
- Microsoft Office - Proficient
- Element Finite Analysis - Competent
- PTC Creo Parametric - Competent
- Docker - Competent

SOFT SKILLS

- Problem Solving
- Communication
- Flexibility
- Teamwork
- Autonomy
- Adaptability
